📍 Coimbatore

PROFESSIONAL SUMMARY

ECE student with hands-on experience in embedded systems, IoT, microcontrollers, sensor integration, and hardware-software integration. Experienced in developing, testing, and debugging ESP32 and Arduino-based systems using C and Python. Strong problem-solving and teamwork skills, with an interest in implementation, system integration, and industrial IoT solutions.

EDUCATION

SNS College of Engineering | B.E - ECE | CGPA: 7.8(Pursuing) | **2023-2027**

Ramakrishna Mission Matric Higher Secondary School | HSC | Percentage: 83% | **Mar 2023**

SKILLS

Core Skills: Hardware-Software Integration, Debugging, Troubleshooting

Technical Skills: Python, C, Embedded Systems, Microcontrollers, Arduino, ESP32

Tools & Platforms: Arduino IDE, Keil, Proteus, Excel, VS Code

Soft Skills: Team Collaboration, Adaptability, Problem Solving

PROJECTS

ESP32-CAM Based Smart Bluetooth Lock – Developed a smart door-lock system using ESP32-CAM with mobile-controlled access for secure authentication. Implemented Bluetooth-based control to operate the door-lock mechanism through a mobile application. Integrated camera functionality to capture visitor images during door-access events, enhancing security and monitoring.

IoT-Based LPG Gas Leakage Detection System – Developed an IoT-based gas leakage detection system using MQ2 sensor, GSM module, relay, and buzzer for real-time safety monitoring. Implemented SMS alerts and alarm activation to notify users during gas leakage. Integrated automatic power supply cut-off through relay control to improve safety during gas leakage detection.

Multilingual Call Translation Assistant – Developed a Python-based application for translating incoming Hindi voice calls into Tamil to support multilingual communication. Implemented speech processing and translation functionality for converting spoken content between languages. Published the project on GitHub for documentation and further development.

PROFESSIONAL EXPERIENCE

TECHVOLT SOFTWARE | Embedded Systems Intern | Jun 2025

- Gained practical experience in microcontroller programming, circuit design, and sensor integration using Arduino and C.
- Worked on real-time embedded applications involving communication, data transfer, and device control.
- Developed practical understanding of hardware-software integration in embedded systems.

DESIGN EDGE | IOT Intern | Dec 2025

- Developed IoT applications using ESP32, sensors, and embedded systems.
- Performed hardware integration, testing, debugging, and system optimization.
- Designed and implemented an Industrial IoT Monitoring System.

CERTIFICATIONS

Azure AI Fundamentals – Microsoft - **June 2025**

NPTEL – Machine Learning - **Sep 2025**

IBM – Lifelong Professional Skills - **Aug 2026**

ADDITIONAL INFORMATION

Achievement:

- Participated in CREONIX Ideathon
- LeetCode 50-Day Badge
